

GIT VERSION CONTROL FOR BEGINNERS

**Mark Durbin, Cloud Computing Engineer III
Office of Research Cyberinfrastructure**

June 22, 2026

PRE-REQUISITES & LESSON MATERIALS

Before starting this lesson, you will need:

- **A GitHub account** — Create a free account at github.com if you don't already have one.
 - Enable 2FA: github.com/settings/security (Settings > Password and authentication)
- **Git installed on your computer** — Git should be installed by default on Mac and Linux.
 - Windows users should download and install Git from gitforwindows.org. Check the setting to add Git Bash profile to Windows Terminal, if available.
- **Open lesson materials link** — github.com/mark-durbin-ucf/git-novice-abridged

AGENDA

1 Automated Version Control

2 Setting up Git

3 Creating a Repository

4 Tracking Changes

5 Exploring History

6 Ignoring Things

7 Remotes in GitHub

8 Q&A
